Personal Statement

I am applying for any working positions in the ICT industry including software engineering and ICT support. I am passionate about learning and gaining work experience in all fields related to computer science. My main interests are in computers and mathematics, which comes from my love of video games at a very early age. My long-term career aspirations are to work in cyber security to help protect websites and people from cyber attacks.

Qualifications

Certificate in IT (Full time), Yoobee College of Creative Innovation
September 2024 to Present (Finishes February 16th 2025)

Bachelor of Science (Full time), Major in Computer Science, University of Canterbury
January 2020 to June 2023
Graduated on the 29th of August 2023

In high school for NCEA level 1, 2 and 3 I did mathematics and lessons on IT and coding at Trades Academy.

Projects

University final year project - An optional course where I worked alongside 6 others to develop a website. I gained experience learning Scrum, and was introduced to common tools used to develop software such as

- Build tools Gradle and Spring Boot
- Testing tools Cucumber and JUnit, Mockito mocking and testing framework
- Selenium for automated testing
- Code quality tools SonarQube and SonarLint
- Thymeleaf, HTML + CSS and JavaScript for the frontend of our application
- Java with Hibernate DBMS for the backend, gRPC for transferring data
- IntelliJ and VS Code IDE's
- Communication tools Slack, Zoom and MS Teams
- Linux and Windows terminal and Git version control

Other projects - I have familiarity with many other languages such as

- Unity game engine and C# for VR game development
- C++, CMake and Visual Studio when creating 3D graphics using OpenGL
- Node.js, TypeScript and React for building a back and frontend for a website for creating and bidding for auctions, similar to TradeMe
- SQL when learning about relational databases as well as database algebra and calculus
- C programming language when learning programming for microcontrollers
- My strongest language overall is Python as it was the language most of my courses chose for programming assignments

Skills

Collaboration - I pride myself on being able to get along well with others at work. I have successfully worked on a large team project with 6 other members developing a website, as well as working with stakeholders, product owners, management, and supervisors. The website was to help future students to make a portfolio from the work they do in class.

People centered - When working in customer facing roles, I prioritise working with the team to deliver the best service for customers. I maintain great professionalism with a calm and caring attitude.

High work standards - My biggest strengths are working to get jobs done to the best standards within a timely manner. Every place that I have worked at, I was always complimented by superiors and managers on my exceptional cleaning ability and attention to detail.

Lifelong learner - I am always ready to learn new things and take the time to pick up skills from others to grow my skill set. I exemplified these skills when developing a website using software and languages that I had no previous experience with.

Work History

IT Contractor (Casual), HQ Recruitment

October 2023 to November 2023

- Efficiently replacing computer monitors for a Westpac Office
- Carefully cleaning IT equipment for Woolworths stores

Housekeeper (Part time), Tasman Holiday Parks, Papanui, Christchurch
